

# Remote Pickups

When tractor and vac don't allow the user access to hard-to-reach areas, the Remote Pickup will get the job done. Twelve and fifteen foot hoses extend vacuuming capabilities around trees and under shrubs. Quick disconnect design allows operator to switch from vacuuming from the mower deck to vacuuming with the Remote Pickup without any tools and little effort.

6	56104	6" Quick Connect	6	56104	6" Quick Connect	6	86102	8" Quick Connect

Step 1 Remove deck chute from the end of the vacuum's intake hose. Slip quick connect inside hose and secure with band clamp.

Step 2 Assemble remote pickup by slipping band clamp over remote hose, slide nozzle into end of hose, and secure with the band clamp. Connect reducer (or splice depending on remote) in the same manner.

Switching from chute to remote is as easy as flipping the latch on the quick disconnect. Your Remote Pick Up Attachment will extend approximately 20 feet from your sweeper. Keep your hose as straight as possible for best results.

Remote Pickups come in three models:

The Model 150 - Comes with 4" diameter wand assembly and remote hose, 6" to 4" reducer and 6" quick connector (for 6" intake).

The Model 160 - Comes with 6" diameter wand assembly and remote hose, 6" splice connector and 6" quick connector (for 6" intake).

The Model 190 - Comes with 6" diameter wand assembly and remote hose, 8" to 6" reducer and 8" quick connector (for 8" intake).
